

GPS WORKFORCE TRACKING MODULE

AMGtime's GPS Workforce Tracking module allows for tracking employees' location during work hours, by using their AMGtime mobile app on Android or iOS. This process starts from the time an employee clocks in and stops when they clock out. All transactions are sent directly to the database, where it can be viewed on an easy-to-read Google map by supervisors and managers.

With the GPS Workforce Tracking module, the mobile app will report the correct route and movement of the employee during a designated time interval. Regardless if you are looking to track traveling employees, or make sure employees are staying within a specific area during working hours, this add-on will be the perfect solution.

Benefits of Using GPS Workforce Tracking:

- Accurate data of your mobile employees' movements
- Efficient allocation of work and routing
- Ensuring employees are exactly where they are supposed to be

- Location Tracking -
